JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Report from Havana—Smallpox on the steamship Navarre—Yellow fever on the schooner Lottie Moore.

HAVANA, CUBA, October 10, 1900.

SIR: I have the honor to submit the following report for the week ended October 6, 1900:

The yellow fever situation remains nearly the same; 21 deaths from the disease were reported, 1 an American.

Two deaths from beriberi have been recorded.

The French trans-Atlantic liner steamship *La Navarre* arrived here on the 4th instant, with a case of smallpox on board. The cabin passengers who had not been exposed were allowed to land. The patient, a steerage passenger, was in the eruptive stage and the entire steerage had been more or less exposed. Careful examination was made of all on board. Sixty-five in the steerage presented evidences of having had an attack of the disease and after a bichloride bath and disinfection of their clothing and dunnage they were allowed to go ashore. All of the others to the number of 436 were sent to Mariel Quarantine Station to be held under observation during the period of incubation. I detailed Acting Asst. Surg. A. B. McDowell to accompany them and assume temporary command at Mariel, Acting Asst. Surg. F. Torralbas to assist and Steward Goodman was sent down with 5 guards and subsistence supplies. Every arrangement possible for the comfort of the passengers has been made. A special guard of 5 men has been detailed for duty and the captain of the port has very kindly lent 2 of his officers. The steamship company provides subsistence, cooks, and attendants for the care of the people. They were all carefully revaccinated on the day of arrival.

A case of yellow fever was removed from the American schooner *Lottie Moore* on the 29th ultimo to the hospital and the vessel immediately disinfected. The captain was not able to clear for two days after and the vessel being bound for Fernandina, Fla., she was redisinfecting before departure.

Acting Asst. Surg. Jose M. Campos has reported 1 death and 1 new case of yellow fever occurring during the week at Batabano.

Another death from the disease is reported from Santa Clara, a young American telegraph operator.

I inclose the mortality report for the week.

Respectfully,

A. H. GLENNAN,
Surgeon, U. S. M. H. S.

The SURGEON-GENERAL,
U. S. Marine-Hospital Service.

[Inclosure.]
